Policy Document – Energy Efficiency Policy

Energy Club Vision and Mission

Vision

To make the students aware and committed to the cause of energy conservation and environmental protection.

Mission

To make the students and staff aware of the need, concept and methodology of energy conservation and environmental protection and its benefits to individuals and nation as a whole by regularly organising talks, seminars, workshops, exhibitions etc.

Steps followed for energy conservation in the college:

- For environmental sustainability, the college is largely relying on the use of non-conventional sources of energy by installing Solar Photovoltaic Panels. Solar panels have been installed on the roof tops of different buildings i.e. Arts Block, Library Building, Boys Hostel and Science Block having capacity of 28kw, 6kw, 5kw and another 5kw respectively. This also serves the objective to encourage our youth to understand the importance of energy conservation and more use of green energy.
- Other energy saving measures taken includes switching off electric equipment/lights when not in use and use of energy efficient LED bulbs.
- Students are regularly sensitized about energy conservation by organising lectures by HPSEB personnel that serves the objective to encourage our youth to understand the importance of energy conservation and more use of green energy.
- Posters related to importance of saving energy are displayed at appropriate locations for sensitising students about energy conservation.
- On various important days (Energy Day, Science Day, Environment Day etc.) that are celebrated by various clubs, competitions are held having themes of environmental sustainability and energy conservation for increasing awareness.

Road Map

- We plan to install more photo voltaic solar panels on Girls' hostel's roof and the under-construction building of administrative block as and when the funds will be available.
- In future will be we will try to use higher star rating products.
